

Problem: Coding of class in SIS was incorrect. The class was created as a cross listed class, when it is supposed to be a stand alone.

To Fix: 1) Ensure no content on the incorrect cross listed course section. Check both the XL parent and the child section. Backup the content if necessary. 2) Delete the cross listed parent and the child section. 3) Correct sections in SIS, or make changes is the focus extract to create desired scenario. 4) Run the On Demand scenario ONLS. 5) Check the XML file NADSISP.BBCLAS.DATA.DOWNLOAD. T20081 or the extract list NADSISP.BBEXT.DATA.T20081. 6) When it looks good, then do the OEM load of WebCampus. The ONLS submittal will push the current file to the server. If you don't run the OEM part, the last file ran will be loaded to WebCampus the next morning at 4:00 a.m. Note: If you don't get it right by the end of the day, call Cheri/Scott to have the files deleted on the server so that they don't automatically load.
